

PROCESSED CHEESE

Product range

BELTAPE M

Pet Mono-metallized

One side lacquered (thermo-sealable)
Possibility to color external part

BELTAPE BI

Pet Bi-metallized

Lacquered on both sides, one is thermo-sealable,
the other one is protective (antioxidant)
Possibility to color external part

BELTAPE L-PET

Pet Mass colored

Laminated
One side lacquered (thermo-sealable)
Different colors available
Different thicknesses available

BELTAPE L-BOPP

BOPP/BOPP

Laminated
One side lacquered (thermo-sealable)
Different colors available
Thermo-sealable

BELTAPE PET

Pet Mono - layer

One side lacquered (thermo-sealable)
Different thicknesses available
Possibility to color external part

PROCESSED CHEESE

Easy open stripe

UNIVERSAL PRODUCT

The processed cheese is a "consumer-friendly" product with a great convenience between amount of proteins and cost. It can be stored at room temperature for long periods therefore it can be easily transported.

To make it even easier to use, years ago, an easy-opening system was conceived, enabling the consumer to open the package without getting the hand dirty.

FOR ALL DEMANDS

Just as there are many different types of melted cheese on the market, from the low-cost one to the premium one, so there are many possibilities concerning the packaging materials.

We can guide and follow you in choosing the material that better suits your requirements.

ACCORDING TO THE LACQUER

The stripe was an innovative product when it was created more than 50 years ago but today the choice of modern materials allows definitely better performances.

For example the choice of the lacquer used both for the stripe and the aluminum increases the performances, lowering the working temperatures.

ACCORDING TO THE PACKAGING MACHINE

In the production of the BELTAPE, we apply the best care but we must acknowledge that a very important part is taken by the filling/package machine used.

In the world there are very few manufacturers of these machines and it happens that one of the best one is just few kilometers from us and they helped us to develop our BELTAPE series.

US

The important results achieved since the company foundation in 1973, has enabled us to dedicate new forces to the sector of flexible packaging for many food applications. We use innovative solvent-less coupling techniques, or solvent/water based coatings which allow us to offer products with great technical, exterior and qualitative characteristics. We follow HACCP and GMP systems and we are certified BRC, with the maximum score.
