COFFEE PACKAGING

CoffeePACK

CoffeePACK

Preserving the aroma of your coffee since 40 years

With over 40 years of experience in the lamination of aluminium and plastics, Effegidi International offers a range of products specifically designed for one of the greatest Italian excellences: **coffee**. Like every Italian we love coffee. Taking care of its **aroma**, scent, freshness is very important and we put as much care and passion into it as possible.

Coffee is not just a beverage, it represents history and tradition and goes from the roasting of the beans, the mumbling of the coffee pot to modern capsules. In order to achieve this, we take great care with the processes and the **choice of materials**, selecting both quality and reliability of suppliers, but also the training of our production technicians, researchers and QA.

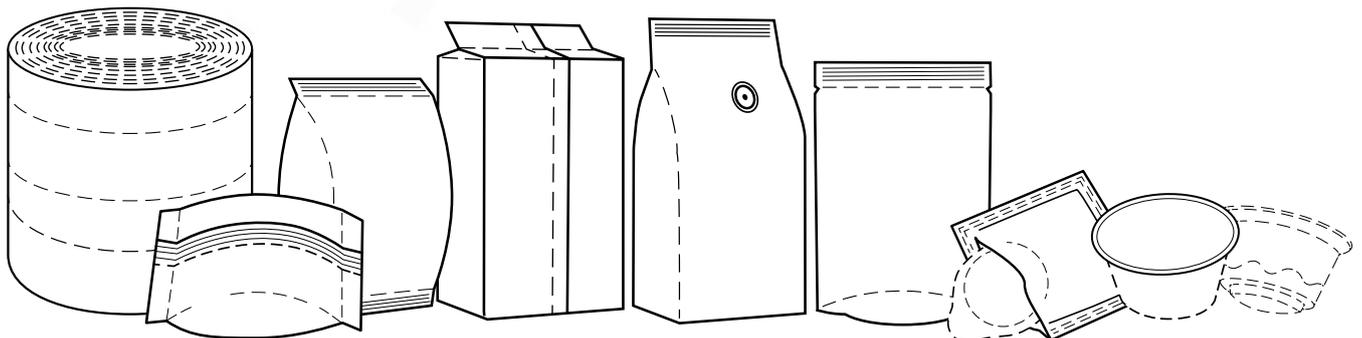

The secret of a good coffee packaging lies in **the preservation** of its particular intense yet volatile aroma. It's a balance between environment, container and coffee. Therefore, materials with a high barrier for gas, light, moisture and other external agents are required.

Our **know-how**, dedicated and certified working environments, together with the careful selection of raw materials, allows us to guarantee a finished product that conforms to its final use in terms of performance and is compliant with legal requirements. We believe in the close cooperation with our customers when developing a project. Our customers are our **partners**.

COFFEE PACKAGING

- ✓ Rolls
- ✓ Bags 1kg, 500 gr, 250 gr
- ✓ Stand up
- ✓ Vacuum bags
- ✓ Film for pods
- ✓ Lid for capsules

PROCESS

Within our departments we realize:

CA/ALU/PE

ALUMINIUM FREE

PP/EVOH/PP
PP/EVOH/PE
PET/ALOX/PET HEAT SEALING
BOPP/PPMET/PPP

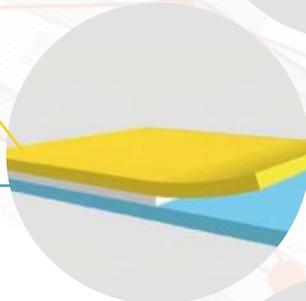

SOME EXAMPLES

1 ALU/LACQUER

1 ALU

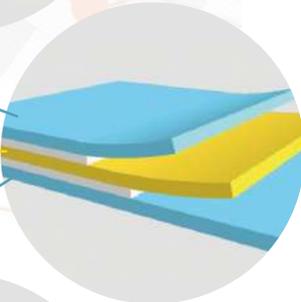

2 PP

1 BOPP

2 OPPMET

3 CPP

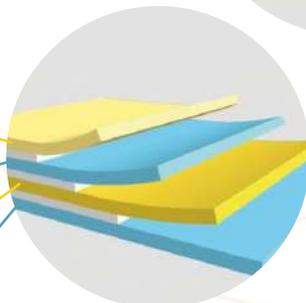

1 CA

2 ALU

3 OPA

4 PE

GREEN SOLUTIONS

Effegidi is committed to **researching solutions** that support the strong evolutionary drive towards environmental awareness and a responsible plastic material, its recycling or compostability.

In the field of Coffee Packaging, this research is realized in the use of **recyclable materials based on polyolefine**, of **lacquered aluminium** and in the usage of **compstable** both for the bags and the capsules: PLA, MaterBi, cellophane, PBS, PBSA, with an attention to the difference between **"OK Compost"** for domestic and industrial use.
